CAREER OBJECTIVE

Seeking a challenging opportunity in mobile application development to learn, explore and work with modern latest techniques and modern technologies. To exercise industry best practices, international standards and work with diverse team environment to develop creative and innovative solutions. I am also looking for a job in Escalating Organization. I am interested in learning about new technologies and utilize them to solve everyday problems and build better and efficient applications.

EDUCATION

Virtual University of Pakistan (VU)

2016 – 2021

Bachelor in Software Engineering CGPA : 3.49
(BSSE)

TECHNICAL SKILL'S

- Java
- React / React Native
- Database (MySQL/MongoDB)
- Html5/Css3
- JavaScript
- Kotlin
- Android SDK
- Collaboration/Communication skills
- OOP

INDUSTRY EXPERIENCE

Skylarks IT Solution

I am currently employed as an Android developer at Skylarks IT Solution, where I specialize in utilizing Java, Kotlin and React Native to build innovative mobile application.

Projects

MartCart App

Role & Responsibilities: Modify and updating app according to requirement.

Key Feature's: It's basically a food ordering app. User can order any type of food and also groceries items. As a key member of the development team, I was responsible for building a user-friendly interface. The app featured an intuitive interface that allowed users to browse menus, place orders, send audio note with orders etc.

Language Used: Kotlin, Java

| | |
|--------------------------|--|
| MC-Restaurant App | <p>Role & Responsibilities: Worked as an Android Developer in making of this project.</p> <p>Key Feature's: This app is developed for merchants to view, confirm and cancel orders. Can view</p> <p>Language used: Java</p> |
| MC-Rider-App | <p>Role & Responsibilities: Modify and updating app according to requirement.</p> <p>Key Feature's: This app is developed for riders. Rider which is a user of this app can confirm order, view the tasks ordered in a map, view full delivery information, view order history, wallet amount and earning amount.</p> <p>Language used: Kotlin, Java</p> |
| MC-Admin App | <p>Role & Responsibilities: Developed this project from scratch with react native.</p> <p>Key Feature's: The app I developed is designed for admin users, providing them with the ability to easily view, cancel and confirm orders, as well as manage store hours. The app also includes robust reporting features, allowing admins to generate detailed reports on a daily weekly, monthly, or yearly basis.</p> <p>Language used: React Native</p> |

PORTFOLIO PROJECTS

| | |
|--------------------------------|--|
| ChatApp | <p>Role & Responsibilities: Developed chat app as a portfolio project.</p> <p>Key Feature's: ChatApp is simple chat application where user can send and receive text messages. Firebase is used for storing all the data related to this app.</p> <p>Language used: Java, Firebase</p> |
| Note App | <p>Role & Responsibilities: Developed note app as a portfolio project.</p> <p>Key Feature's: NoteApp is simple note taking application where user can save, update and delete notes.</p> <p>Language used: Kotlin, Room, MVVM</p> |
| FYP Project | <p>Expert System for Assessing Programming Course Performance of E-learning Student</p> <p>Roles & Responsibilities: Developed Expert system in final year project.</p> <p>Key Feature's: This is an AI project developed for the course instructor or teacher to evaluate the performance of the students. This project uses Fuzzy Logic for evaluation of student performance.</p> <p>Technologies Used: Python, Flask, Html/CSS, Bootstrap, MySQL</p> |
| YouTube Clone | <p>Roles & Responsibilities: Developed this clone from scratch.</p> <p>Key Feature's: Developed this project for my portfolio. This is a simple YouTube clone web app. User can search and view videos just like as on YouTube. Checkout project here</p> <p>Technologies Used: React, Tailwind css, Rapid API</p> |
| To-do App (Web) | <p>Roles & Responsibilities: Developed this web application from scratch.</p> <p>Key Feature's: To-do App is simple web application, where user create new to-do note and can access it any time. This application has multiple features like dark and light mode, user can filter notes according to their status. Checkout project here</p> <p>Technologies Used: JavaScript, Bootstrap</p> |
| Html & CSS Projects | <p>Fylo Dark Theme Landing Page</p> <p>Project Tracking Intro Component</p> <p>Testimonials Grid Section Main</p> |
